

Application Example

SECU Truck Control

SECU Truck Control as a Theft Control System for LPG Tanker-Trucks

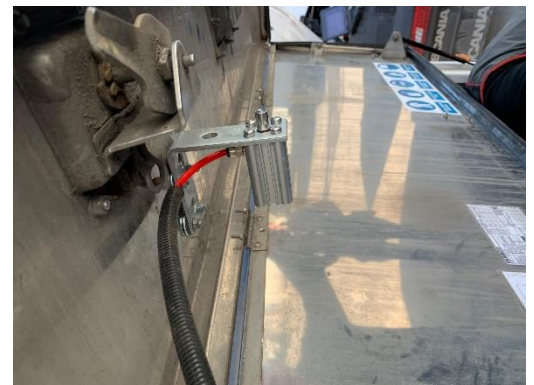

SECU Truck Control is used on LPG tanker-trucks as a theft control system.

The cabinet box (instrument box) is protected against unauthorized accesses by implementing 3 different sensors which are placed at different places as well as a special locking-mechanism. The locking is controlled continuously random also during the closure time. The data transfer takes place via modem.

The SECU Truck Control is protected via a tamper-proof, robust and stabil housing.

In case of unauthorized accesses alarm mails are immediately sent out and shown on a digital map. The application works with geo-fence data. Tracking of the tanker-trucks is possible.
